

Difference Between HTTP 1.1 and HTTP 2

HTTP stands for hypertext transfer protocol. it is used in client-server communication. By using HTTP user sends the request to the server and the server sends the response to the user. Several Stages 1. HTTP 1.1 and 2. HTTP 2

HTTP 1.1	HTTP 2
<p>There is head of line blocking that blocks all the requests behind it until it doesn't get its all resources.</p> <p>Multiplexing</p> 	<p>It allows multiplexing so one TCP connection is required for multiple requests.</p> 
<p>It works on the textual format.</p>	<p>It works on the binary protocol.</p>
<p>It uses formats like gzip to compress the data transferred in the messages.(It compresses data by itself.)</p>	<p>It uses HPACK compression to decrease the average size of the header.</p>
